

Disc

Disc is a component connecting to Plough implement that is attached to the tractor, using for soil preparation process before planting. It made of the special kind of steel which has undergone through a heat-hardening process by qualified production process. It is considered as the highest quality disc in Thailand. Apart from the higher hardness than general steel discs in the market, our discs are tough, durable, and suitable for agricultural soil condition of all kinds.

The company's discs are distributed under "Pegasus" brand. We also provide contracted manufacturing services for other brands upon customer's specification such as the "Elephant" brand of Siam Kubota Corporation Co., Ltd. that consists of 3 types of Discs: Plow Disc, Harrow Disc, and Furrow Disc.
